## **COERCION and Its Fallout**

Analyzes the devastating consequences of coercion. "The basic research on coercion has been done; it is time to talk about its significance."

"... the culmination of over 40 years of research and thought by one ... who has examined both the facts and implications of aversive control. ... it becomes readily apparent why adolescents drop out of school, why children run away from home, why spouses leave their partners, why employees quit ... and why persons in institutions escape ... extremely thought-provoking ..." — *Joseph E. Spradlin, in American Journal on Mental Retardation.*

"The results of the Intro Psych students and I sharing our knowledge of the coercive process were miraculous ... students became eager to participate in the noncoercive climate." — *W.I., Connecticut.*
